---

Susan:

FJ Doyle: It is not a lag. It will take at least 3-4 weeks to get the data and put it in tables to review. I did not want to overcommit to getting something in case we ran into issues.

Trottner: The same thing with Trottner. This issue with Trottner is that we are working directly with EPA ORD on the isotopic analysis. ORD will do TAL metals and send the samples to the lab in Ada, OK to do the isotopic (They said a minimum of 60 days for this based upon schedules).

If you have any other questions, call me. I am on-site in San Antonio.

Gary

I don't understand the lag in getting data on Trottner and FJ Doyle stated in WAR as July and mid June. When will we receive prelim data on both sites? Is it speciation timing on Trottner? Please provide me a timeline on both sites. Tx u Susan.
